Technical Progress in Agriculture -- Chapter Seven. The Microeconomics of Agricultural Institutions -- Chapter Eight. Agricultural Institutions and Growth -- Chapter Nine. The State and the Market -- Chapter Ten. Conclusions: Agriculture and Economic Growth in the Long Run -- Statistical Appendix -- Notes -- Bibliography -- Index
Sommario/riassunto	In the last two centuries, agriculture has been an outstanding, if somewhat neglected, success story. Agriculture has fed an ever-growing population with an increasing variety of products at falling prices, even as it has released a growing number of workers to the rest of the economy. This book, a comprehensive history of world agriculture during this period, explains how these feats were accomplished. Feeding the World synthesizes two hundred years of agricultural development throughout the world, providing all essential

data and extensive references to the literature. It covers, systematically, all the factors that have affected agricultural performance: environment, accumulation of inputs, technical progress, institutional change, commercialization, agricultural policies, and more. The last chapter discusses the contribution of agriculture to modern economic growth. The book is global in its reach and analysis, and represents a grand synthesis of an enormous topic.
