|    | Nota di contenuto              | Front Cover; Sulfuric Acid Manufacture: Analysis, Control, and<br>Optimization; Copyright; Contents; Preface; Chapter 1: Overview; 1.1.<br>Catalytic oxidation of SO2 to SO3; 1.1.1. Catalyst; 1.1.2. Feed gas<br>drying; 1.2. H2SO4 production; 1.3. Industrial flowsheet; 1.4. Sulfur<br>burning; 1.5. Metallurgical offgas; 1.6. Spent acid regeneration; 1.7.<br>Sulfuric acid product; 1.8. Recent developments; 1.9. Alternative<br>processes; 1.9.1. Wet gas sulfuric acid; 1.9.2. Sulfacid®; 1.10.<br>Summary; References; Suggested reading; Chapter 2: Production and<br>consumption; 2.1. Uses; 2.2. Acid plant locations<br>2.3. Price2.4. Summary; References; Suggested reading; Chapter 3:<br>Sulfur burning; 3.1. Objectives; 3.2. Sulfur; 3.2.1. Viscosity; 3.3. Molten<br>sulfur delivery; 3.3.1. Sulfur pumps and pipes; 3.4. Sulfur atomizers<br>and sulfur burning furnaces; 3.4.1. Sulfur atomizers; 3.4.2. Dried air<br>supply; 3.4.3. Main blower; 3.4.4. Furnace; 3.5. Product gas; 3.5.1. Gas<br>destination; 3.5.2. Composition and temperature control; 3.5.3. Target<br>gas composition; 3.5.4. Target gas temperature; 3.6. Heat recovery<br>boiler; 3.7. Summary; References; Suggested reading; Chapter 4:<br>Metallurgical offgas cooling and cleaning<br>4.1. Initial and final SO2 concentrations4.2. Initial and final dust<br>concentrations; 4.3. Offgas cooling and heat recovery; 4.4. Electrostatic |

|                    | collection of dust; 4.5. Water scrubbing (Tables4.5 and 4.6); 4.5.1. Gas<br>temperature after scrubbing; 4.5.2. Impure scrubbing liquid; 4.5.3.<br>Mercury removal (Outotec, 2011; Schlesinger et al., 2011); 4.5.4.<br>Fluorine removal; 4.6. H2O(g) removal from scrubber exit gas (Tables4.<br>5 and 4.6); 4.7. Summary; References; Suggested reading; Chapter 5:<br>Regeneration of spent sulfuric acid; 5.1. Spent acid compositions; 5.2.<br>Spent acid handling<br>5.3. Decomposition5.3.1. Other reactions; 5.3.2. Spent acid spraying;<br>5.4. Decomposition furnace product; 5.5. Optimum decomposition<br>furnace operating conditions; 5.5.1. Temperature effects; 5.5.2. O2<br>content effects; 5.6. Preparation of offgas for SO2 oxidation and H2SO4<br>making; 5.6.1. Gas composition; 5.7. Summary; References; Suggested<br>Reading; Chapter 6: Dehydrating air and gases with strong sulfuric<br>acid; 6.1. Chapter objectives; 6.1.1. H2O(g) before gas dehydration;<br>6.2. Dehydration with strong sulfuric acid; 6.2.1. H2O(g) concentration<br>after gas dehydration<br>6.2.2. Choice of dehydration acid strength6.3. Dehydration reaction<br>mechanism; 6.3.1. Maximizing dehydration rate; 6.4. Residence times;<br>6.5. Recent advances; 6.6. Summary; References; Chapter 7: Catalytic<br>oxidation of SO2 to SO3*; 7.1. Objectives; 7.2. Industrial SO2<br>oxidation; 7.2.1. Source of O2; 7.3. Catalyst necessity; 7.3.1.<br>Temperature effect; 7.4. SO2 oxidation ``heatup path (Chapter 11);<br>7.5. Industrial multicatalyst bed SO2 oxidation (Tables 7.2-7.7); 7.5.1.<br>Overall multicatalyst bed results; 7.5.2. Double contact acidmaking;<br>7.6. Industrial operation (Table7.2); 7.6.1. Startup<br>7.6.2. Steady operation |

| Sommario/riassunto | By some measure the most widely produced chemical in the world<br>today, sulfuric acid has an extraordinary range of modern uses,<br>including phosphate fertilizer production, explosives, glue, wood<br>preservative and lead-acid batteries. An exceptionally corrosive and<br>dangerous acid, production of sulfuric acid requires stringent<br>adherence to environmental regulatory guidance within cost-efficient<br>standards of production. This work provides an experience-based<br>review of how sulfuric acid plants work, how they should be designed<br>and how they should be operated for maximum sulfur capture and  |
