| Sommario/riassunto      | Alcohol-attributable injuries and violence are of growing concern to the World Health Organization. Alcohol-related injuries are especially evident in hospital emergency rooms and trauma centers. The clinical encounters in these settings present a one-time chance for health professionals to get access to a population often difficult to reach. Reduction of the burden of such injuries can be achieved by implementing evidence-based public health strategies, policy measures and effective interventions on a broad scale. This publication draws together the current state of knowledge on research, pra |
