Sommario/riassunto	Lung cancer is the most common cancer affecting the industrialized world and affects the lives of thousands of people, including patients' friends and family, every year. The most common cause of lung cancer is long-term exposure to tobacco smoke. The occurrence of lung cancer in nonsmokers, who account for as many as 15% of cases, is often attributed to a combination of genetic factors, radon gas, asbestos, and air pollution, including secondhand smoke. The aim of this book is to give, in a clear and simple way, succinct information

about all aspects of this type of cancer, with a stress on t
