international politics; 7. Nations in networks: prestige, status

inconsistency, influence, and conflict -- Part III. The Implications of the Networked International Politics Theory: 8. Democratic networks: resolving the democratic peace paradox; 9. Interdependence and international conflict: the consequences of strategic and economic networks; 10. Evolution and change in the world system: a structural analysis of dependence, growth, and conflict in a class society; 11. An international system of networks: how networks interact; 12. The network analysis of international politics: insights and evidence.

Sommario/riassunto

Maoz views the evolution of international relations over the last two centuries as a set of interacting, cooperative and conflicting networks of states. The networks that emerged are the result of national choice processes about forming or breaking ties with other states. States are constantly concerned with their security and survival in an anarchic world. Their security concerns stem from their external environment and their past conflicts. Because many of them cannot ensure their security by their own power, they need allies to balance against a hostile international environment. The alliance choices made by states define the structure of security cooperation networks and spill over into other cooperative networks, including trade and institutions. Maoz tests his theory by applying social networks analysis (SNA) methods to international relations. He offers a novel perspective as a system of interrelated networks that co-evolve and interact with one another.
