Sommario/riassunto	In Insurgency Online, Michael Dartnell focuses on a new form of conflict made possible by global communications. The Internet, Dartnell argues, is affecting extensive changes to the way politics are carried out, by inserting a range of non-state actors onto the global political stage. He demonstrates that Web activism raises issues about the organization of societies and the distribution of power and contends

that the development of online activism has far-reaching social and political implications, with parallels to the influence of the invention of the printing press, the telegraph, and the radio. Dartnell concentrates on Web activists who use the Net as a media tool, distinguishing this use from information terrorism, which threatens or harasses through 'hacking' or electronic sabotage. Using the examples of the Revolutionary Association of the Women of Afghanistan (RAWA), which opposed the Taliban, the Peruvian Movimiento Revolucionario Tupac Amaru (MRTA) and its campaign against the Fujimori government, and the Irish Republican Socialist Movement (IRSM), Dartnell evaluates the political implications and general character of Web activism among non-state actors. Insurgency Online shows that online activism is a ripe, new territory for non-governmental actors to raise awareness and develop support around the world.

Sommario/riassunto	<p>Eventual achievement of nuclear disarmament has been an objective and a dream of the world community since the dawn of the Nuclear Age. Considerable progress has been made over the decades, but this has always required close US-Russian cooperation. At present, further progress is likely blocked by the return of Vladimir Putin to the Russian presidency and the toxic US-Russia relationship. The classic road toward nuclear disarmament appears to be closed for the foreseeable future, but there may be another route. In the last fifty years, well-conceived regional treaties have been developed in Latin America, the South Pacific, Africa, Southeast Asia, and Central Asia. These arrangements have developed for many and varied political and security reasons, but now virtually all of the Southern Hemisphere and important parts of the Northern Hemisphere are legally nuclear-weapon-free. These regional nuclear weapon disarmament treaties are formally respected by the five states recognized under the Non-</p>

Proliferation Treaty (NPT) as nuclear weapon states: the United States, the United Kingdom, Russia, France, and China--often referred to collectively as the P-5 states. Variations of these regional treaties might eventually be negotiated in the Middle East, Northeast Asia, and South Asia, setting aside the P-5 states until the very end of the process. With regional agreements in place around the globe, negotiation among the P-5 states would be all that stands between the world community and the banishment of nuclear weapons, verifiably and effectively worldwide. By the time this point is reached, Russia and the United States might be able to cooperate. Essential reading for policy advisors, foreign service professionals, and scholars in political science, *The Alternate Route* examines the possibilities of nuclear-weapon-free zones as a pathway to worldwide nuclear disarmament.
