Sommario/riassunto	The income gap in China has been widening since the country started economic reform in 1978. It can be said that the increasing penetration of Foreign Direct Investment (FDI) into the Chinese economy and a widening income gap among residents are two remarkable phenomena that appeared almost at the same time after China began reform and openness. People are therefore prone to correlate the two phenomena and ask: Is there a certain correlation between FDI and the widening

income gap in China? If there is, how does the strength of this correlation evolve? What strength has it reached so far? How
