Sommario/riassunto	How do films work? How do they tell a story? How do they move us and make us think? Through detailed examinations of passages from classic films, Marilyn Fabe supplies the analytic tools and background in film

history and theory to enable us to see more in every film we watch. Ranging from D. W. Griffith's *The Birth of a Nation* to James Cameron's *Avatar*, and ending with an epilogue on digital media, *Closely Watched Films* focuses on exemplary works of fourteen film directors whose careers together span the history of the narrative film. Lively and down-to-earth, this concise introduction provides a broad, complete, and yet specific picture of visual narrative techniques that will increase readers' excitement about and knowledge of the possibilities of the film medium. Shot-by-shot analyses of short passages from each film ground theory in concrete examples. Fabe includes original and well-informed discussions of Soviet montage, realism and expressionism in film form, classical and modern sound theory, the classic Hollywood film, Italian neorealism, the French New Wave, auteur theory, modernism and postmodernism in film, political cinema, feminist film theory and practice, and narrative experiments in new digital media. Encompassing the earliest silent films as well as those that exploit the most recent technological innovations, this book gives us the particulars of how film-arguably the most influential of contemporary forms of representation-constitutes our pleasure, influences our thoughts, and informs our daily reality. Updated to include a discussion of 3-D and advanced special effects, this tenth anniversary edition is an essential film studies text for students and professors alike.

## Nota di contenuto

Background: Gingival recessions: Definition and classification -- Etiology of gingival recessions. Prognostic factors: Prognosis: Defect related factors -- Prognosis: Patient related factors -- Prognosis: Operator related factors. Surgical implementation: Surgical procedures -- Critical elements in execution.

---

## Sommario/riassunto

This book is an evidence-based guide to periodontal root coverage that provides up-to-date information on the etiology of gingival recession defects, prognostic factors relating to the defect, patient, or operator, and surgical techniques. Attention is drawn to critical elements in the execution of surgical procedures that can impact on outcomes. In order to ensure that the guidance reflects the highest level of evidence, the authors have undertaken an exhaustive literature search of the four main electronic databases (MEDLINE/PubMed, Cochrane Library, ScienceDirect, and EBSCOhost) for studies on root coverage, including randomized clinical trials, systematic reviews, meta-analyses, and network meta-analyses. The aim is to supply readers with a truly reliable source of knowledge that will help them to navigate this complex field, in which numerous surgical procedures have been described, with great variability in clinical and statistical outcomes. The book will be of value to all who wish to improve their understanding of gingival recession defects and the techniques to achieve root coverage that offer the best long-term results.
