Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Section 1. The social and spiritual body -- Section 2. Negotiating medicine, healing and religious belief -- pt. 3. Virtue, health and the state.
Sommario/riassunto	This book explores the ways in which the body is sacred in Western medicine, as well as how this idea is played out in questions of life and death, of the autopsy and of the meanings attributed to illnesses and disease. Ritual and religious modifications to, and limitations on what may be done to the body raise cross cultural issues of great complexity – philosophically and theologically, as well as sociologically - within medicine and for health care practitioners, but also, as a matter of primary concern for the patient. The book explores the ways in which medicine organises the moral and the immoral, the sacred and the profane; how it mediates cultural concepts of the sacred – of the body, of blood and of life and death.

Sommario/riassunto	Healing to All Their Flesh asks us to step back and carefully rethink the relationship between religion and health. It does so by examining overlooked issues of theology and meaning that lie at the foundation of religion's supposed beneficial function. Is a religion-health relationship consistent with understandings of faith within respective traditions? What does this actually imply? What does it not imply? How have these ideas been distorted? Why does this matter-for medicine and healthcare and also for the practice of faith? Is the ultimate relation between spirit and flesh, as
