

1. Record Nr.	UNINA9910460416003321
Autore	Downing Keith L
Titolo	Intelligence emerging : adaptivity and search in evolving neural systems // Keith L. Downing
Pubbl/distr/stampa	Cambridge, Massachusetts ; ; London, England : , : MIT Press, , [2015] [Piscataway, New Jersey] : , : IEEE Xplore, , [2015]
ISBN	0-262-32867-4 0-262-32866-6
Descrizione fisica	1 online resource (499 p.)
Disciplina	006.32
Soggetti	Neural networks (Computer science) Machine learning Experiential learning Genetic algorithms Adaptive computing systems Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Emergence -- Search : the core of AI -- Representations for search and emergence -- Evolutionary algorithms -- Artificial neural networks -- Knowledge representation in neural networks -- Search and representation in evolutionary algorithms -- Evolution and development of the brain -- Learning via synaptic tuning -- Trial and error learning in neural networks -- Evolving artificial neural networks -- Recognizing emergent intelligence.
Sommario/riassunto	Emergence -- the formation of global patterns from solely local interactions -- is a frequent and fascinating theme in the scientific literature both popular and academic. In this book, Keith Downing undertakes a systematic investigation of the widespread (if often vague) claim that intelligence is an emergent phenomenon. Downing focuses on neural networks, both natural and artificial, and how their adaptability in three time frames -- phylogenetic (evolutionary), ontogenetic (developmental), and epigenetic (lifetime learning) -- underlie the emergence of cognition. Integrating the perspectives of

evolutionary biology, neuroscience, and artificial intelligence, Downing provides a series of concrete examples of neurocognitive emergence. Doing so, he offers a new motivation for the expanded use of bio-inspired concepts in artificial intelligence (AI), in the subfield known as Bio-AI. One of Downing's central claims is that two key concepts from traditional AI, search and representation, are key to understanding emergent intelligence as well. He first offers introductory chapters on five core concepts: emergent phenomena, formal search processes, representational issues in Bio-AI, artificial neural networks (ANNs), and evolutionary algorithms (EAs). Intermediate chapters delve deeper into search, representation, and emergence in ANNs, EAs, and evolving brains. Finally, advanced chapters on evolving artificial neural networks and information-theoretic approaches to assessing emergence in neural systems synthesize earlier topics to provide some perspective, predictions, and pointers for the future of Bio-AI.
