

1. Record Nr.	UNINA9910460834003321
Autore	Penney Richard C.
Titolo	Linear algebra : ideas and applications // Richard Penney
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , 2016 ©2016
ISBN	1-118-90962-3
Edizione	[Fourth edition.]
Descrizione fisica	1 online resource (513 p.)
Disciplina	512/.5
Soggetti	Algebras, Linear Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Linear Algebra; Contents; Preface; Features of the Text; Acknowledgments; About the Companion Website; Chapter 1 Systems of Linear Equations; 1.1 The Vector Space of Matrices; The Space R^n ; Linear Combinations and Linear Dependence; What Is a Vector Space?; Why Prove Anything?; Exercises; 1.1.1 Computer Projects; Exercises; 1.1.2 Applications to Graph Theory I; Self-Study Questions; Exercises; 1.2 Systems; Rank: The Maximum Number of Linearly Independent Equations; Exercises; 1.2.1 Computer Projects; Exercises; 1.2.2 Applications to Circuit Theory; Self-Study Questions Exercises1.3 Gaussian Elimination; Spanning in Polynomial Spaces; Computational Issues: Pivoting; Exercises; Computational Issues: Counting Flops; 1.3.1 Computer Projects; Exercises; Applications to Traffic Flow; Self-Study Questions; Exercises; 1.4 Column Space and Nullspace; Subspaces; Exercises; Computer Projects; Chapter Summary; Chapter 2 Linear Independence and Dimension; 2.1 The Test for Linear Independence; Bases for the Column Space; Testing Functions for Independence; Exercises; 2.1.1 Computer Projects ; Exercises; 2.2 Dimension; Exercises; 2.2.1 Computer Projects Exercises2.2.2 Applications to Differential Equations; Exercises; 2.3 Row Space and the rank-nullity theorem; Bases for the Row Space; Summary; Computational Issues: Computing Rank; Exercises; 2.3.1 Computer Projects; Exercises; Chapter Summary; Chapter 3 Linear Transformations; 3.1 The Linearity Properties; Exercises; 3.1.1

Computer Projects; Exercises; 3.2 Matrix Multiplication (Composition);
Partitioned Matrices; Computational Issues: Parallel Computing;
Exercises; 3.2.1 Computer Projects; Exercises; 3.2.2 Applications to
Graph Theory II; Self-Study Questions; Exercises
3.3 Inverses Computational Issues: Reduction versus Inverses;
Exercises; 3.3.1 Computer Projects; Exercises; 3.3.2 Applications to
Economics; Self-Study Questions; Exercises; 3.4 The LU Factorization;
Exercises; 3.4.1 Computer Projects; Exercises; 3.5 The Matrix of a
Linear Transformation; Coordinates; Application to Differential
Equations; Isomorphism; Invertible Linear Transformations; Exercises;
Computer Projects; Exercises; Chapter Summary; Chapter 4
Determinants; 4.1 Definition of the Determinant; 4.1.1 The Rest of the
Proofs; Exercises; 4.1.2 Computer Projects
4.2 Reduction and Determinants Uniqueness of the Determinant;
Exercises; 4.2.1 Volume; Exercises; A Formula for Inverses; Exercises;
Chapter Summary; Chapter 5 Eigenvectors and Eigenvalues; 5.1
Eigenvectors; Exercises; 5.1.1 Computer Projects; Exercises; 5.1.2
Application to Markov Processes; Exercises; 5.2 Diagonalization;
Powers of Matrices; Exercises; 5.2.1 Computer Projects; Exercises;
5.2.2 Application to Systems of Differential Equations; Exercises; 5.3
Complex Eigenvectors; Complex Vector Spaces; Exercises; 5.3.1
Computer Projects; 5.3 Exercises; Chapter Summary
Chapter 6 Orthogonality
