

1. Record Nr.	UNINA9910461077103321
Titolo	Polymer carbon nanotube composites : the polymer latex concept // Nadia Grossiord, Marie Claire Hermant, Cor Koning
Pubbl/distr/stampa	Singapore : , : Pan Stanford Pub., , 2012
ISBN	0-429-06623-6 981-4364-16-9
Descrizione fisica	1 online resource (248 p.)
Altri autori (Persone)	GrossiordNadia HermantMarie Claire KoningCor
Disciplina	620.193
Soggetti	Nanotubes Polymers Composite materials Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Front Cover; Preface; Contents; 1. Introduction; 2. Toolbox for Dispersing Carbon Nanotubes into Polymers to Get Electrically Conductive Nanocomposites; 3. Tailoring and Monitoring the Sonication-Driven Dispersion of Carbon Nanotubes in Aqueous Surfactant Solutions; 4. Aspects of Processing Methods and Conditions Affecting Percolation Networks; 5. On the Versatility of the Latex-Based Process Regarding the Choice of the Polymer Matrix of the Nanocomposite; 6. Manipulating the Percolation of CNTs Using Hybrid Composite Systems; 7. Future Perspectives
Sommario/riassunto	This book provides readers with a comprehensive toolbox for dispersing single-walled and multiwalled carbon nanotubes in thermoplastic polymer matrices. The book starts with an overview of all known techniques for dispersing CNTs in thermoplastic polymers and then concentrates on one of the most versatile techniques known nowadays: the so-called latex technology. Also discussed are the basic principles of this latex technology, the role of the matrix viscosity on percolation threshold, the importance of the intrinsic CNT quality, the

use of ""smart"" surfactants facilitating electron transport
