#### Sommario/riassunto

This volume contains cutting edge contributions that consider new approaches to three areas: the documentation of rock art; its interpretation using indigenous knowledge; and the presentation of rock art. Working with Rock Art is the first edited volume to consider each of these areas in a theoretical rather than a technical fashion, and it therefore makes a significant contribution to the discipline. The volume aims to promote the sharing of new experiences between leading researchers in the field. While the geographic focus is truly global, there is a dominant north-south axis with strong representation from researchers in southern Africa and northern Europe, two leading centres for new approaches in rock art research. Working with Rock Art opens up a long overdue dialogue about shared experiences between these two centres, and a number of the chapters are the first published results of new collaborative research--Internet.
