| Livello bibliografico   | Monografia   |
| Note generali           | Description based upon print version of record.  |
| Nota di bibliografia    | Includes bibliographical references and index.   |
| Nota di contenuto       | pt. 1. Plastics, elastomeric and nanocomposite materials -- pt. 2. Biobased polymers and recycling -- pt. 3. Plastic processing -- pt. 4. Additives, colorants and fillers -- pt. 5. Design and applications.  |
| Sommario/riassunto      | A practical reference for all plastics engineers who are seeking to answer a question, solve a problem, reduce a cost, improve a design or fabrication process, or even venture into a new market. Applied Plastics Engineering Handbook covers both polymer basics - helpful to bring readers quickly up to speed if they are not familiar with a particular area of plastics processing - and recent developments - enabling practitioners to discover which options best fit their requirements. Each chapter is an authoritative source of practical advice for engineers, providing authoritative guidanc |
