11. Families and schools-a network of interdependent agencies: the ecology of development
12. The social construction of school exclusion;
REFERENCES

Sommario/riassunto

Children and young people spend a great deal of their time in schools and other education settings. Consequently those working in such contexts have a huge impact and influence on the development, experiences and thinking of the children and young people with whom they interact. This book represents the richness and variety of ideas shared by some of the contributors to the first European Conference on Child and Adolescent Mental Health in Education Settings, held in Paris in 2005 and hosted by the Tavistock and Portman NHS Foundation Trust. The intention of the event was to gather together child mental health and educational professionals from across Europe to share innovative practice. The success and impact of this conference was such that it became the first of what is now a bi-annual series of events each taking place in a different European city.
