Case Study With and Without the Diversity/Resiliency Formulation

Sommario/riassunto

Mental health practitioners have long recognized the failure of the DSM to address important sources of strength and resiliency that can significantly affect diagnosis and treatment, a deficit that has become more pronounced with the DSM-5's elimination of the multiaxial format. The second edition of Strengthening the DSM presents a new conceptual framework - the Diversity/Resiliency Formulation - that encompasses the whole person in order to promote effective diagnosis and treatment. It considers patient strengths, sources of resilience, support, and cultural identity that are essential to an
