Sommario/riassunto	This study presents detailed information on the book production per century and on the uses of medieval manuscripts in eleven areas of the Latin West. Based on a sample from an extensive library and on additional information the numbers of manuscripts surviving from the period 500 – 1500 have been assessed statistically. Other data have been used to quantify the loss rates of such books in the Latin West. Combining both sets of data allowed the estimation of the medieval production rates of manuscripts. Book production during the Middle Ages can be seen as a century-average indicator of local economic output. With a number of explanatory variables (monasteries, universities) the medieval book production in the Latin West can be

adequately explained.

Sommario/riassunto	The rapid advancement of genetic science, fuelled by the Human Genome Project and other related initiatives, promises a new kind of public health practice based on the pre-detection of disease according to calculations of genetic risk. This book by two well-known sociologists: * explores the implications of the new genetics for public health as a body of knowledge and a domain of practice * assesses the impact of new genetic information and technologies on conceptions of health, illness, embodiment, self and citizenship * critically examines the complex discourses surrounding hum
