Sommario/riassunto	Poverty Reduction and Sustainable Development in Rural China is translated from the original Chinese to provide a look into how scholars in China have been assessing perceptions of poverty and reforms to improve conditions. This volume, and the others in the SSRC series, provides Western scholars with an accessible English language look at the state of current scholarship in China and, as such, does not simply

provide information for the direct study of socio-political issues, but also for meta-level analysis of how the domestic scholarship in China is developing and assessing the interplay of the country's political and economic reforms with the society and daily life of its people.
