Sommario/riassunto

This exciting book examines how human tissues and cells are being exchanged, commodified and commercialized by new health technologies. Through a discussion of emergent global 'tissue economies' the author explores the social dynamics of innovation in the fields of tissue engineering and stem cell science. The book explores how regenerative medicine configures and conceptualizes bodies and argues that the development of regenerative medicine is a feminist issue. In *Regenerating Bodies*, Kent critically examines the transformative potential of regenerative medicine and

Sommario/riassunto	This volume, which collects Northrop Frye's writings on the theory of literary criticism from the middle period of his career, includes one of Frye's own favourites, The Critical Path (1971). A highly important marker of Frye's career, The Critical Path openly addresses topics that

he had previously been reluctant to discuss as fully, including the importance of literature to society, the responsibilities of critics, and the deeper rationales for studying literature. Filled with insightful texts that indicate his transition from literary critic to a theorist of language, myth, and human culture, this edition helps to illuminate many of the ideas and arguments that would appear later in *The Great Code* and *Words with Power*. Accompanied by the rigorous scholarship for which the series is renowned, this is another valuable contribution to literary criticism and theory.
