

1. Record Nr.	UNINA9910462206503321
Titolo	Disaster nursing and emergency preparedness for chemical, biological, and radiological terrorism and other hazards [[electronic resource] /] / Tener Goodwin Veenema, editor
Pubbl/distr/stampa	New York, : Springer Pub. Co., 2012
ISBN	1-78402-774-X 0-8261-0865-2
Edizione	[3rd ed.]
Descrizione fisica	1 online resource (xxxv, 764 pages) : illustrations
Altri autori (Persone)	VeenemaTener Goodwin
Disciplina	616.02/5
Soggetti	Disaster nursing Emergency management Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Disaster preparedness. Essentials of disaster planning -- Leadership and coordination in disaster health care systems: the U.S. National response framework -- Emergency health services -- Hospital and emergency department preparedness -- Human services in disasters and public health emergencies: social disruption, individual empowerment, and community resilience -- Disaster mental health. Understanding the psychosocial impact of disasters -- Management of the psychosocial effects of disasters -- American Red Cross disaster health services and disaster nursing: national capability-local community impact -- Disaster management. Legal and ethical issues in disaster response -- Crisis communication: the role of the media -- Disaster management -- Disaster triage -- Emergency medical consequence planning for special events, mass gatherings, and mass casualty incidents -- Management of burn mass casualty incidents -- Traumatic injury due to explosives and blast effects -- Global disasters and complex human emergencies. Natural disasters -- Restoring public health under disaster conditions: basic sanitation, water and food supply, and shelter -- Climate change and the nurse's role in policy and practice -- Environmental disasters and emergencies -- Complex humanitarian emergencies -- Disaster relief nursing in the 21st century

-- Disasters caused by chemical, biological, and radiological agents. Biological and chemical terrorism: a unique threat -- Surveillance systems for detection of biological events -- Biological agents of concern -- Early recognition and detection of biological events -- Infectious disease emergencies -- Medical countermeasures dispensing -- Chemical agents of concern -- Decontamination and personal protective equipment -- Radiological incidents and emergencies -- High risk high vulnerability populations. Identifying and accommodating high risk, high vulnerability populations in disasters -- Unique needs of children during disasters and other public health emergencies -- Disaster nursing in schools and other community congregate child care settings -- Care of the pregnant woman and newborn following a disaster -- Caring for patients with HIV and AIDS following a disaster -- Special topics in disasters. Disaster recovery: creating sustainable disaster resistant communities -- Appendix. Public health preparedness and response: core competency model -- Appendix II: Glossary of terms commonly used in disaster preparedness and response -- Appendix III: Patient isolation precautions -- Appendix IV: Federal Emergency Management Agency: emergency response action steps -- Appendix V: Creating a personal disaster plan.

---

### Sommario/riassunto

In this third edition Dr. Veenema continues her mission to help our nation's nurses develop the knowledge and skills needed to efficiently and effectively respond to disasters. Many times nurses assume that they aren't emergency responders, so they don't need to understand how the system works. When a disaster strikes a community-whether it's a bus accident, a tornado, a hurricane or terrorist attack-nurses will be on the front lines helping those who are in need. To protect themselves, their families and their communities, nurses need to understand the principles and content of this comprehensive textbook.
