Sommario/riassunto	Greek tragedy is widely read and performed, but outside the commentary tradition detailed study of the poetic style and language of Aeschylus, Sophocles and Euripides has been relatively neglected. This book seeks to fill that gap by providing an account of the poetics of the tragic genre. The author describes the varied handling of spoken dialogue and of lyric song; major topics such as vocabulary, rhetoric and imagery are considered in detail and illustrated from a broad range of plays. The contribution of the chorus to the dramas is also

discussed. Characterisation, irony and generalising statements are treated in separate chapters and these topics are illuminated by comparisons which show not only what is shared by the three major dramatists but also what distinguishes their practice. The book sheds light both on the genre as a whole and on many particular passages.

Sommario/riassunto	The Compatibility Gene takes readers on a global journey of discovery spanning 60 years, involving scores of scientists, and encompassing

the history of transplants and immunology. That journey has revealed astonishing links between who we are as individuals and our never-ceasing struggle to survive disease. Most of the 25,000 genes we possess are the same for all of us. Compatibility genes are those that vary most from person to person and give each of us a unique molecular signature. These genes determine both the extent to which we are susceptible to a vast range of illnesses and the differ
