#### Sommario/riassunto

"This collection of review articles is devoted to the modeling of ecological, epidemiological and evolutionary systems. Theoretical mathematical models are perhaps one of the most powerful approaches available for increasing our understanding of the complex population dynamics in these natural systems. Exciting new techniques are currently being developed to meet this challenge, such as generalized or structural modeling, adaptive dynamics or multiplicative processes. Many of these new techniques stem from the field of nonlinear dynamics and chaos theory, where even the simplest mathematical rule can generate a rich variety of dynamical behaviors that bear a strong analogy to biological populations."

### Sommario/riassunto

This volume focuses on the contribution of German-speaking refugees from Nazism to the performing arts in Britain, evaluating their role in broadcasting, theatre, film and dance from 1933 to the present. It contains essays evaluating the role of refugee artists in the BBC German Service, including the actor Martin Miller, the writer Bruno Adler and the journalist Edmund Wolf. Miller also made a career in the English theatre transcending the barrier of language, as did the actor Gerhard Hinze, whose transition to the English stage is an instructive example of adaptation to a new theatre culture. In film, language problems were mitigated by the technical possibilities of the medium, although stars like Anton Walbrook received coaching in English. Certainly, technicians from Central Europe, like the cameraman Wolf Suschitzky, helped establish the character of British film in the 1950's and 1960's. In dance theatre, language played little role, facilitating the influence in Britain of dance practitioners like Kurt Jooss and Sigurd Leeder. Finally, evaluating the reverse influence of émigrés on Germany, two essays discuss Erich Fried's translations of Shakespeare and Peter Zadek's early theatre career in Germany.
