

1. Record Nr.	UNINA9910463037103321
Titolo	Bacterial membranes : structural and molecular biology / / Edited by Han Remaut and Remi Fronzes
Pubbl/distr/stampa	Norfolk, England : , : Caister Academic Press, , [2014] ©2014
ISBN	1-908230-91-6
Descrizione fisica	1 online resource (513 p.)
Disciplina	589.90875
Soggetti	Bacterial cell walls Bacteria - Physiology Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	part I. Membrane composition and synthesis -- part II. Protein-lipid interactions -- part III. Transport across bacterial membranes -- part IV. Signal transduction across bacterial membranes -- part V. Bacterial membranes in pathogenesis.
Sommario/riassunto	Membranes are pivotal components of life, acting as formidable insulators that demarcate a living cell; generate energy in the form of ion gradients; transport ions, proteins, nucleic acids, nutrients, and metabolites; and provide transduction systems to sense the environment and to communicate with other cells. Membranes also provide shape and structure to cells and are important in cell motility. In addition, they fulfill a scaffolding function for proteins and organelles that interact with the extracellular environment. Written by specialists in the field, this book provides a comprehensive
