

1. Record Nr.	UNINA9910463074203321
Autore	Rimkus Liudvikas
Titolo	Structural mechanics : a handbook for students : study book // Liudvikas Rimkus, Juozas Nagevicius, Romanas Karkauskas
Pubbl/distr/stampa	Vilnius : , : Technika, , 2012
ISBN	609-457-225-4
Descrizione fisica	1 online resource (190 p.)
Soggetti	Mechanics Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Contents ; Introduction ; 1. General statements; 1.1. The Purpose of Calculations and the Main Assumptions; 1.2. Design Schemes for Structures; 1.3. Classification of Design Schemes for Structures; 1.4. Actions and Loads; 1.5. Supports and Links; 1.6. Formulation of Principal Problems Encountered in Structural Mechanics; 1.7. Degree of Freedom; 1.8. Analysis of a Geometrically Stable Bar Structure; 1.9. Physical Models of Materials; 2. Statically determinate systems; 2.1. Analysis of Beams; 2.2. Influence Lines for Beams; 2.2.1. The Concept of the Influence Line 2.2.2. Influence Lines for Simple Beams 2.2.3. Influence Lines for Continuous Beams; 2.2.4. Calculation of Unknown Quantities Applying Influence Lines; 2.2.5. Calculation of Extreme (Highest/Lowest) Values Applying Influence Lines; 2.3. Frame Structures; 2.3.1. Analysis of Simple Frames; 2.3.2. Analysis of Complex Frames; 2.4. Truss Structures; 2.4.1. Analysis of Truss Structures; 2.4.2. Influence Lines for Trusses; 2.5. The Main Theorems of Structural Mechanics; 2.5.1. Clapeyron's Theorem; 2.5.2. The Concepts of Generalized Force and Generalized Displacement 2.5.3. Theorem of Work Done by Internal Forces 2.5.4. The Principle of Virtual Displacements; 2.5.5. Real and Virtual Work Done by External and Internal Forces; 2.5.6. Potential Energy of the Elastic Bar System; 2.5.7. Betti's Reciprocal Work Theorem; 2.5.8. Maxwell's Theorem of Reciprocal Displacements; 2.5.9. Rayleigh's Theorem of Reciprocal

Reactions; 2.5.10. Calculation of Displacements Caused by External Load; 2.5.11. Calculation of Displacements Caused by Support Settlement; 2.5.12. Calculation of Displacements Caused by Temperature Changes; 3. Statically indeterminate systems
3.1. The Force Method
3.1.1. The Primary System for the Force Method;
3.1.2. Canonical Equations for the Force Method; 3.1.3. Real Effects (Internal Forces) in Statically Indeterminate Structures; 3.1.4. Verification; 3.1.5. Calculation of Displacements; 3.2. The Displacement Method; 3.2.1. Unknowns in the Displacement Method; 3.2.2. The Primary System in the Displacement Method; 3.2.3. Canonical Equations for the Displacement Method; 3.2.4. Real Internal Forces in Statically Indeterminate Systems; References
