Sommario/riassunto

"Can Orthodox Christianity offer unique spiritual resources especially suited to the environmental concerns of today? This book makes the case that yes, it can. In addition to being the first substantial and comprehensive collection of essays, in any language, to address environmental issues from the Orthodox point of view, this volume with contributions from the most highly influential theologians and philosophers in contemporary world Orthodoxy will engage a wide audience, in academic as well as popular circles--resonating not only with Orthodox audiences but with all those in search of a fresh approach to environmental theory and ethics that can bring the resources of ancient spirituality to bear on modern challenges"--

This collection of studies on the legal work of Suarez explores some of his major forays into the law. Both his theoretical system-building as well as his interventions in

practical questions are covered. Next to discussions on the nature of law and its different categorisations, they extend to various subbranches of the law including family law, property law, the law of obligations, criminal law and international law.
