Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Sommario/riassunto	Despite increasing interest in intra-abdominal hypertension (IAH) and abdominal compartment syndrome (ACS) as causes of significant morbidity and mortality among the critically ill, unanswered questions cloud the understanding of the pathophysiology of these conditions: • Are IAH and ACS synonymous? • What are the ideal methods of measuring and lowering intra-abdominal pressure (IAP)? • When should we think of IAH? • Can IAH be prevented? • What level of IAP requires abdominal decompression? Written by two experts in critical care and IAP, Intra-Abdominal Hypertension is a distillation of the current literature and furthers the understanding of these complex critical conditions. Using a step-by-step approach and illustrative figures, this clinical handbook presents a concise overview of consensus definitions, measurement methods, organ assessment and treatment options. Intra-Abdominal Hypertension is essential reading for all members of the intensive care multidisciplinary team, including experienced and junior physicians, anesthetists and nurses.

3. Record Nr.	UNISA996395842103316
Titolo	By the Queene. A proclamation to charge all persons that haue gotten any maner goods into their possession, which haue beene taken on the seas this last yeere, and haue not bene custumed, to restore the same vpon paine to bee punished as felons and pirates [[electronic resource]]
