Sommario/riassunto	The Chronicles of Narnia series has entertained millions of readers, both children and adults, since the appearance of the first book in 1950. Here, scholars turn the lens of philosophy on these timeless tales. Engagingly written for a lay audience, these essays consider a wealth of topics centered on the ethical, spiritual, mythic, and moral resonances in the adventures of Aslan, the Pevensie children, and the rest of the colorful cast. Do the spectacular events in Narnia give readers a simplistic view of human choice and decision making? Does Aslan offer a solution to the problem

Nota di contenuto	Introduction.- Methods and Techniques for Diagnostics and Monitoring -- Technical Diagnostics of Machines and Plants -- Structural Health Monitoring and Performance Control.- Excursion.
Sommario/riassunto	This book presents concepts, methods and techniques to examine symptoms of faults and failures of structures, systems and components and to monitor functional performance and structural integrity. The book is organized in five parts. Part A introduces the scope and application of technical diagnostics and gives a comprehensive overview of the physics of failure. Part B presents all relevant methods and techniques for diagnostics and monitoring: from stress, strain, vibration analysis, nondestructive evaluation, thermography and industrial radiology to computed tomography and subsurface microstructural analysis. Part C cores the principles and concepts of technical failure analysis, illustrates case studies, and outlines machinery diagnostics with an emphasis on tribological systems. Part D describes the application of structural health monitoring and performance control to plants and the technical infrastructure, including buildings, bridges, pipelines, electric power stations, offshore wind structures, and railway systems. And finally, Part E is an excursion on diagnostics in arts and culture. The book integrates knowledge of

basic sciences and engineering disciplines with contributions from research institutions, academe, and industry, written by internationally known experts from various parts of the world, including Europe, Canada, India, Japan, and USA.
