The Future of the Council on Environmental Quality and the Environmental Protection Agency: 2015-2035Postscript: Sustainability and the Environmental Protection Agency; Appendix 1; Appendix 2; Notes; Bibliography; Index
Sommario/riassunto	In this book, James K. Conant and Peter J. Balint examine the trajectory of environmental policy and administration in the United States by looking at the development of the CEQ and EPA. They look at changes in budgetary and staffing resources over time as well as the role of quality of leadership as key indicators of capacity and vitality. As well, they make correlations between the agencies' fortunes and various

social, political, and economic variables.

| Sommario/riassunto | Generally, categories are understood to express the most general features of reality. Yet, since categories have this special status, obtaining a correct list of them is difficult. This question is addressed by examining how Thomas Aquinas establishes the list of categories through a technique of identifying diversity in how predicates are per se related to their subjects. A sophisticated critique by Duns Scotus of this position is also examined, a rejection which is fundamentally grounded in the idea that no real distinction can be made from a logical one. It is argued Aquinas's approach can be rehabilitated in that real distinctions are possible when specifically considering per se modes of predication. This discussion between Aquinas and Scotus bears fruit in a contemporary context insofar as it bears upon, strengthens, and seeks to correct E. J. Lowe's four-category ontology view regarding the identity and relation of the categories. |
