remains of houses at Great Linford and Westbury

| Sommario/riassunto | The starting point of this book was a meeting in 1948 in Leicestershire when historians and archaeologists visited newly identified sites of deserted villages. The excitement of these discoveries changed approaches to the medieval countryside. Sixty years later a new group of scholars went back to the same sites and debated their significance in the light of many advances in knowledge. Thousands of villages and smaller settlements were deserted in England and Wales during all periods, though many of them were abandoned between 1340 and 1750. Why were they deserted? Why did some villages survive while others were abandoned? Who was responsible for their desertion? What can we learn about life in the countryside from a study of the deserted sites?. Since the 1970s these questions have been set aside while interest has shifted to the origin and planning of villages, and the regional differences which led to a 'village England' developing across the middle of the country, while everywhere else people lived in hamlets and individual farms. Now seems the right moment to return to the subject and with fresh eyes reopen the important questions which were not fully answered in the early days. In this book ten leading archaeologists, geographers and historians have come together to revisit the deserted villages and reveal much new evidence and new thinking about these fascinating sites. |

Sommario/riassunto

Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads. The new edition addresses their concerns. Norms for speech development are given, differentiating between the emergence of the ability to produce speech sounds (articulation) and typical developmental error patterns (phonology). The incidence of speech disorders is described for one UK service providing crucial information for service management. The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with dis
