Considerations; 6.1 Does the input matter? Languages vs. dialects in contact; 6.2 A different perspective on universals; 6.3 Reflection upon material and methods; 6.4 Outlook; Bibliography; I Works cited; II Online articles and electronic resources; Appendices
Sommario/riassunto	This study deals with different explanatory models for the emergence or existence of linguistic features in varieties of the English language.

After a brief overview of the current research, five non-standard varieties from all over the world, ranging from a traditional dialect to pidgins and creoles, are analyzed in two morphosyntactic and two phonological features. The theoretical approaches are discussed with reference to the features, providing recommendations for or advice against certain explanatory models. Finally, Bybee's usage-based functionalist approach and the usage-based synthesis
