

1. Record Nr.	UNINA9910464196403321
Autore	Kowalski Andres M
Titolo	Concepts and recent advances in generalized information measures and statistics // Andres Kowalski, Raul D. Rossignoli, Departamento de Fisica-IFLP, Universidad Nacional de La Plata and Comision de INvestigaciones Cientificas, La Plata, Argentina, Evaldo M.F. Curado, Centro Brasileiro de Pesquisas Fisicas and National Institute of Science and Technology for Complex Systems, Rio de Janeiro, Brazil
Pubbl/distr/stampa	Sharjah, UAE : , : Bentham Science Publishers, , [2013] ©2013
ISBN	1-60805-760-7
Descrizione fisica	1 online resource (432 p.)
Soggetti	Information measurement Statistics Information theory Entropy (Information theory) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	part I. Fundamental concepts -- part II. Applications.
Sommario/riassunto	Since the introduction of the information measure widely known as Shannon entropy, quantifiers based on information theory and concepts such as entropic forms and statistical complexities have proven to be useful in diverse scientific research fields. This book contains introductory tutorials suitable for the general reader, together with chapters dedicated to the basic concepts of the most frequently employed information measures or quantifiers and their recent applications to different areas, including physics, biology, medicine, economics, communication and social sciences. As these quantif
