Sommario/riassunto	John Buridan (d. 1361) was one of the most talented and influential philosophers of the late Middle Ages. His fame extended far into the seventeenth century and underwent a revival in the twentieth century, when the French physicist Pierre Duhem rediscovered his manuscripts

and wrote studies about them. So far, very few of Buridan's works have been edited. Two different questions commentaries on Aristotle's *De generatione et corruptione* by Buridan have been preserved. They originated in his classroom. Neither of them has ever been edited. This book presents a critical edition of the question commentary that survived in the greater number of manuscripts, and which was particularly popular at Central European universities. *Medieval and Early Modern Science* , 14
