Sommario/riassunto	The Annual IEEE IFIP International Conference on Dependable Systems and Networks (DSN) has pioneered the fusion between dependability and security research, understanding the need to simultaneously fight against accidental faults, intentional cyber attacks, design errors, and unexpected operating conditions Its distinctive approach to both accidental and malicious faults made DSN the most prestigious international forum for presenting research furthering robustness and resilience of today s wide spectrum of computing systems and networks, with dependability embracing security aspects under a common body of knowledge All aspects on the research and practice of dependability and applied security are within the scope of DSN, including innovative architectures, protocols and algorithms, as well as experimentation with and assessment of dependable and secure systems and networks.
