## Sommario/riassunto

The purpose of this study is to build a stronger evidence base on the role of faith-inspired, private secular, and public schools in sub-Saharan Africa using nationally representative household surveys as well as qualitative data. Six main findings emerge from the study: (1) Across a sample of 16 countries, the average market share for faith-inspired schools is at 10-15 percent, and the market share for private secular schools is of a similar order of magnitude; (2) On average faith-inspired schools do not reach the poor more than other groups; they also do not reach the poor more than public
