Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Context, objectives, and methodology -- Conceptual framework -- The role of mediating factors for FDI spillovers in developing countries : Evidence from a global dataset -- Determining the nature and extent of spillovers : Empirical assessment -- Sector case study : mining -- Sector case study : agribusiness -- Sector case study : apparel -- Summary of main conclusions -- Policy implications.
Sommario/riassunto	Foreign direct investment (FDI) is becoming increasingly critical to the economies of developing countries, in part due to a major expansion in the scope of global value chains (GVCs), whereby lead firms outsource parts of their production and services activities across complex

international networks. While FDI delivers a number of important contributions in terms of investment, employment, and foreign exchange, it is its spillover potential - the productivity gain resulting from the diffusion of knowledge and technology from foreign investors to local firms and workers - that is perhaps the m
