

1. Record Nr.	UNINA9910464604803321
Titolo	Frontiers of nanofiber fabrication and applications : special topic volume with invited peer reviewed papers only // edited by Hong-Yan Liu and Ji-Huan He
Pubbl/distr/stampa	Durnten-Zurich : , : TTP, , [2014] ©2014
ISBN	3-03826-329-X
Descrizione fisica	1 online resource (120 p.)
Collana	Advanced materials research, , 1022-6680 ; ; volume 843
Altri autori (Persone)	LiuHongyan HeJi-Huan
Disciplina	620.11
Soggetti	Nanofibers Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Frontiers of Nanofiber Fabrication and Applications; Preface; Table of Contents; Effect of Ultrasonic Vibration on Electrospun Poly(vinyl Alcohol) (PVA) Nanofibers; Vibration and Heat Effect on Electrospinning Modeling; Hierarchical Motion of Charged Jets in Electrospinning and Nanofibers with Minimal Diameter of about 5nm; High Orientation Ordered Nanofibers Fabricated by Electrospinning; Multi-Bubble Electrospinning of Nanofibers; Two Dimensional Nano-Net by Bubble Electrospinning; Frequency of Bubble Formation in Modified Bubble Electrospinning Edible Starch for Fabrication of Nanoparticles by ElectrospinningWeb-Like Nanofibers for Improving Fibroblast Growth; Antibacterial Activity of Polyester Fabric Treated with Nano-TiO ₂ via One-Bath Process; Fabrication and Preliminary Study of a Prototype Bi-Layered Small Diameter Vascular Prosthesis Composed of Nano-Fiber and Silk Fiber; Influence of Chemical Structure on Wetting Property of Down Fibers; Fabrication of Micro Yarn Composed of Nanofibers by Blown Bubble Spinning; Droplet-Like Beads in the Surface of Nanofibers by Bubble-Electrospinning A Belt-Like Superfine Film Fabricated by Bubble-ElectrospinningDiffusion of Silver Ions in Hollow Cylinders with an

Auxiliary Cylinder; Change of Leaf Morphology along Altitudinal Gradients; An Exact Solution to the Local Fractional Richards' Equation for Unsaturated Soils and Porous Fabrics; Experimental Verification and Theoretical Analysis of Silk Dyeing and Finishing Functions with Modified Natural Tea Polyphenols Dye; Functionalization Research of Silk Fabrics with PVP/ZnO Nanoparticles for Improving Silk Dyeability with Natural Tea Polyphenol Dye; Keywords Index; Authors Index

Sommario/riassunto

This special issue covers mainly electrospinning, vibration-electrospinning, bubble electrospinning and blown bubble spinning, and it is a good reference not only for materials science, but also for various communities in physics, nanotechnology and chemistry. The most widely used method for fabricating nanofiber is electrospinning, but there are intrinsic deficiencies when using it for mass production, and one theme of these papers is variations or alternatives that works better in various situations. The topics include high-orientation ordered nanofibers fabricated by electrospinning, the fr
