

1. Record Nr.	UNINA9910464605803321
Titolo	The childhood immunization schedule and safety : stakeholder concerns, scientific evidence, and future studies // Committee on the Assessment of Studies of Health Outcomes Related to the Recommended Childhood Immunization Schedule, Board on Population Health and Public Health Practice, Institute of Medicine of the National Academies
Pubbl/distr/stampa	Washington, District of Columbia : , : National Academies Press, , [2013] ©2013
ISBN	0-309-26703-X
Descrizione fisica	1 online resource (235 p.)
Disciplina	614.4/7083
Soggetti	Immunization of children - Standards - United States Vaccination of children - Standards - United States Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Determination of the immunization schedule -- Existing data sources and systems -- Stakeholder concerns related to the safety of the immunization schedule -- Review of scientific findings -- Methodological approaches to studying health outcomes associated with the current immunization schedule: options, feasibility, ethical issues, and priorities -- Conclusions and recommendations.
Sommario/riassunto	"The Childhood Immunization Schedule and Safety: Stakeholder Concerns, Scientific Evidence, and Future Studies reviews scientific findings and stakeholders concerns related to the safety of the recommended childhood immunization schedule. This report also identifies potential research approaches, methodologies and study designs that could inform this question, considering strengths, weaknesses as well as ethical and financial feasibility of each approach. This report draws on data from existing surveillance systems, such as the Vaccine Safety Datalink, could be used and offers the best means for ongoing research efforts regarding the safety of the schedule. In

recognition of this, future federal research approaches should: collect and assess evidence regarding public confidence in and concerns about the entire childhood immunization schedule, with the goal to improve communication with health care professionals, and between health care professionals and the public regarding safety; standardize definitions of key elements of the schedule, and relevant health outcomes; establish research priorities on the basis of epidemiological evidence, biological plausibility, and feasibility; and continue to fund and support the Vaccine Safety Datalink project to study the safety of the recommended immunization schedule"--
