

1. Record Nr.	UNINA9910464649903321
Autore	De Bartolo Loredana
Titolo	Membrane systems : for bioartificial organs and regenerative medicine // Loredana De Bartolo, Efrem Curcio, Enrico Drioli
Pubbl/distr/stampa	Berlin, [Germany] ; ; Boston, Massachusetts : , : De Gruyter, , 2017 ©2017
ISBN	3-11-039088-4 3-11-026801-9
Descrizione fisica	1 online resource (264 pages) : illustrations
Disciplina	574.875
Soggetti	Membranes (Biology) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Frontmatter -- Preface -- Contents -- 1 Natural and synthetic membranes -- 2 Basic issues in membrane separation for biomedical devices -- 3 Artificial organs -- 4 Blood-membrane interactions -- 5 Engineering of membrane bio-hybrid organs -- 6 Cell-membrane interactions -- 7 Membrane bioartificial organs -- 8 Regulatory framework and ethical issues -- Index
Sommario/riassunto	Membrane processes today play a significant role in the replacement therapy for acute and chronic organ failure diseases. Current extracorporeal blood purification and oxygenation devices employ membranes acting as selective barriers for the removal of endogenous and exogenous toxins and for gas exchange, respectively. Additionally, membrane technology offers new interesting opportunities for the design of bioartificial livers, pancreas, kidneys, lungs etc. This book reviews the latest developments in membrane systems for bioartificial organs and regenerative medicine, investigates how membrane technology can improve the quality and efficiency of biomedical devices, and highlights the design procedures for membrane materials covering the preparation, characterization, and sterilization steps as well as transport phenomena. The different strategies pursued for the development of membrane bioartificial

organs, including crucial issues related to blood/cell-membrane interactions are described with the aim of opening new and exciting frontiers in the coming decades. The book is a valuable tool for tissue engineers, clinicians, biomaterials scientists, membranologists as well as biologists and biotechnologists. It is also a source of reference for students, academic and industrial researchers in the topic of biotechnology, biomedical engineering, materials science and medicine.
