Solow -- The geoengineered planet / Martin L. Weitzman -- Notes -- Contributors -- Index.
Sommario/riassunto	In this book, ten prominent economists--including Nobel laureates and several likely laureates--offer their ideas about the world of the twenty-second century. In scenarios that range from the optimistic to the guardedly gloomy, these thinkers consider such topics as the transformation of work and wages, the continuing increase in inequality, the economic rise of China and India, the endlessly repeating cycle of crisis and (projected) recovery, the benefits of technology, the economic consequences of political extremism, and the long-range effects of climate change.
