Sommario/riassunto Failing states share characteristics of inadequate structural competency, including, inter alia, the inability to advance human welfare and security. Economic inequalities and corruption are present, as well as a loss of legitimacy and reduced social cohesion. Failure of rule of law is manifested in areas of judicial adjudication, security, reduced territorial control and systemic political instability. The international community often confronts these challenges in a manner that actually complicates issues further through lack of consensus among state actors. Consequently, a new and emerging concept of sovereignty requires review in terms of the postmodern state. Through

scholarly consideration, State Legitimacy and Failure in International Law evaluates gaps in structural competency that precipitate state

failure and examines the resulting consequences for the world community
