

1. Record Nr.	UNINA9910464724503321
Autore	Ott Dennis <1983->
Titolo	Local instability [[electronic resource]] : split topicalization and quantifier float in German // Dennis Ott
Pubbl/distr/stampa	Berlin ; ; Boston, : De Gruyter, 2012
ISBN	1-283-62873-2 3-11-029095-2 9786613941183
Descrizione fisica	1 online resource (184 p.)
Collana	Linguistische Arbeiten, , 0344-6727 ; ; 544
Disciplina	435
Soggetti	German language - Locative constructions German language - Syntax German language - Quantifiers German language - Grammar Minimalist theory (Linguistics) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Originally presented as the author's thesis (doctoral-Harvard University) under the title: Local instability: The Syntax of Split Topics, 2011.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Front matter -- 0 Acknowledgments -- Contents -- 1 Introduction: Aims and Scope -- 2 Split Topics: Empirical Properties and Theoretical Problems -- 3 The Syntax of Split Topics: A Novel Approach -- 4 An Extension to Quantifier Float -- 5 Conclusion and Outlook -- References -- Index
Sommario/riassunto	This monograph argues for a novel approach to split topicalization and quantifier float in German, based on the premise that syntactic structure-building proceeds solely via free application of Merge. Following recent developments in the pursuit of a more principled theory of syntax, it is argued that the stipulative notion of 'projection' ought to be dispensed with: syntactic objects created by Merge are not headed, and endocentricity arises due to a simple search algorithm. When this algorithm fails, specifically in symmetric {XP,YP} structures, an unlabeled constituent results; where a label is required, such

structures are locally unstable. It is argued that both split topics and floated quantifiers are the result of this kind of local instability: when an exocentric predication structure is merged in argument or adjunct position, XP must be displaced at the phase level to allow for determination of a label. It is this symmetry-breaking movement that yields the 'split constituent' in surface form. Based on careful empirical scrutiny of two recalcitrant problems for syntactic theory, the present work adduces substantial support for a 'minimalist' grammatical architecture devoid of phrase-structural residue.
