Sommario/riassunto

This clear and accessible introduction to linguistic typology covers all linguistic domains from phonology and morphology over parts-of-speech, the NP and the VP, to simple and complex clauses, pragmatics and language change. There is also a discussion on methodological issues in typology. This textbook is the first introduction that consistently applies the findings of the World Atlas of Language Structures, systematically includes pidgin and creole languages and devotes a section to sign languages in each chapter. All chapters contain numerous illustrative examples and specific featur
