

1. Record Nr.	UNINA9910465191303321
Titolo	Biologically inspired cognitive architectures 2011 [[electronic resource] ] : proceedings of the second annual meeting of the BICA Society / / edited by Alexei V. Samsonovich and Kamilla R. Johannsdottir
Pubbl/distr/stampa	Amsterdam ; ; Washington, D.C., : IOS Press, c2011
ISBN	6613433047 1-283-43304-4 9786613433046 1-60750-959-8
Descrizione fisica	1 online resource (504 p.)
Collana	Frontiers in artificial intelligence and applications, , 0922-6389 ; ; v. 233
Altri autori (Persone)	SamsonovichAlexei V JohannsdottirKamilla R
Disciplina	004 006.3
Soggetti	Artificial intelligence - Data processing Cognition Computer architecture Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	Title Page; Preface; BICA 2011 Conference Committees; Contents; Conference Papers and Extended Abstracts; Biologically Inspired Cognitive Architectures: One More Step Forward; Evaluating the Contribution of Top-Down Feedback and Post-Learning Reconstruction; Computational Modeling of Therapies Related to Cognitive Vulnerability and Coping; Natural Human Robot Meta-Communication Through the Integration of Android's Sensors with Environment Embedded Sensors; Towards a Biologically-Inspired Model for Relational Mapping Using Spiking Neurons Rapid Prototyping of a Cognitive System for Pediatric Telephone Triage TutoringLearning Categories with Invariances in a Neural Network Model of Prefrontal Cortex; Towards Externalist Robotics; An Innovative Mobile Phone Based System for Humanoid Robot Expressing Emotions

and Personality; Fusing Symbolic and Decision-Theoretic Problem Solving + Perception in a Graphical Cognitive Architecture; From Biology to Inspiration and Back: Is the Pallidal Complex a Reservoir?; Architectures of Complex Learning Systems; The Role of the Predicted Present in Artificial and Natural Cognitive Systems  
 Evolving Neural Networks for Artificial Intelligence  
 Data Formats in Multineuronal Systems and Brain Reverse Engineering; Parallel and Serial Components in Human-Like Intelligence; Narrative Is a Key Cognitive Competency; Automatic Verb Valency Pattern Recognition; Vision and Emotional Flow in a Cognitive Architecture for Human-Machine Interaction; Cognitive Meta-Learning of Syntactically Inferred Concepts; Integrative General Intelligence for Controlling Game AI in a Minecraft-Like Environment; ASKNet: Leveraging Bio-Cognitive Models in Natural Language Processing  
 Human-Artificial-Intelligence Hybrid Learning Systems  
 The What, Why and How of the BI in BICA; On the Simulation of Human Frailty; Adaptive Recall in Hippocampus; A Conceptual Space Architecture for Widely Heterogeneous Robotic Systems; From Repetition Suppression in Stroop to Backward Inhibition in Task Switching: An Example of Model Reusability; Modeling Temporal Dynamics with Function Approximation in Deep Spatio-Temporal Inference Network; Conscious Expectation System; The Roots of Trust: Cognition Beyond Rational; Four Processing Modes of in situ Human Behavior  
 SPIRE - A BICA-Emulated Strategic Decision Support System  
 Recognizing Geospatial Patterns with Biologically-Inspired Relational Reasoning; Neuromorphic and Brain-Based Robots; Development of a Robot that Cognizes and Learns Unknown Events; Computational Hypothesis for Maturing Out of Addiction and Mindfulness-Based Cognitive Techniques; Does Radical Externalism Suggest How to Implement Machine Consciousness?; Anthropological, Socio-Biological Framework as Master Architect of Human Cognitive Architectures; IARPA's ICaRUS Program: Brain-Inspired Cognitive Models for Intelligence Analysis  
 Towards a Biologically Inspired Question-Answering Neural Architecture

---

## Sommario/riassunto

This book presents the proceedings of the Annual International Conference on Biologically Inspired Cognitive Architectures, BICA 2011, which is also the Second Annual Meeting of the BICA Society, held in November 2011 in Arlington, Virginia, USA. A Biologically Inspired Cognitive Architecture (BICA) is a computational framework for the design of intelligent agents that incorporates formal mechanisms of human or animal cognition. Biology currently provides the only physical examples of cognitive systems at the level of robustness, flexibility, scalability and consciousness that artificial intel
