## Sommario/riassunto

Utilizing a decade's worth of clinical experience gained since its original publication, Mary Jo Peebles builds and expands upon exquisitely demonstrated therapeutic approaches and strategies in this second edition of *Beginnings*. The essential question remains the same, however: How does a therapist begin psychotherapy? To address this delicate issue, she takes a thoughtful, step-by-step approach to the substance of those crucial first sessions, delineating both processes and potential pitfalls in such topics as establishing a therapeutic alliance, issues of trust, and history taking.

Sommario/riassunto	The growth in government programs to support high-technology industry within national economies and their impact on international science and technology cooperation and on the multilateral trading system are of considerable interest worldwide. Accordingly, these topics were taken up by STEP in a study carried out in conjunction with the Hamburg Institute for Economic Research and the Institute for World Economics in Kiel. One of the principal recommendations for further work emerging from that study was a call for an analysis of the principles of effective cooperation in technology development, to include lessons from national and international consortia, including eligibility standards and assessments of what new cooperative mechanisms might be developed to meet the challenges of

international cooperation in high-technology products.
