Sommario/riassunto

In *Beyond Greenways: The Next Step for City Trails and Walking Routes*, greenways expert Robert Searns makes a case for walking infrastructure that serves a more diverse array of people. He builds on the legacy of boulevards, parkways, and greenways to introduce a next generation of more accessible pathways, wide enough for two people to stroll together, that stitch together urban and suburban areas. With more trails built near neighborhoods that haven't had access to them, more people can get around on foot, in town or further out. Searns lays out practical advice on how to plan and design them, garner community support, and get them built. Drawing inspiration from the US and abroad, he introduces two models—grand loop trails and town walks.
