

1. Record Nr.	UNINA9910465454003321
Autore	Rodriguez-Ibabe J. M.
Titolo	Thin slab direct rolling of microalloyed steels // J.M. Rodriguez-Ibabe
Pubbl/distr/stampa	Stafa-Zuerich ; ; United Kingdom : , : Trans Tech, , [2007] ©2007
ISBN	3-03813-162-8
Descrizione fisica	1 online resource (154 p.)
Collana	Materials science foundations, , 1422-3597 ; ; volume 33
Disciplina	672.32
Soggetti	Steel alloys Rolling (Metal-work) Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Thin Slab Direct Rolling of Microalloyed Steel; Preface; Table of Contents; Table of Contents; 1. Introduction; 1.1. Different Types of TSDR Industrial Routes; 1.2. Economical and Ecological Benefits; 1.3. Metallurgical Differences between Conventional Rolling and TSDR; 1.4 Scope; 2. Strength and Toughness: Relationships with Microstructure; 2.1. Introduction; 2.2. Strength (in Low Carbon Steels); 2.3. Toughness; 2.4. Microstructural Homogeneity and Toughness (in the Ductile-Brittle Regime); 3. Microstructural Control during and after Hot Rolling 3.1. Microstructural Changes during Hot Working3.2. Conventional Controlled Rolling; 3.3. Recrystallisation Controlled Rolling. Effect of Titanium; 3.4. Mean Flow Stress; 3.5. Phase Transformation during Cooling. Precipitation Hardening; 4. TSDR: Continuous Casting and Tunnel Furnace; 4.1. Continuous Casting; 4.2. Tunnel Furnace; 5. TSDR: Rolling of Plain Carbon and Microalloyed Steels; 5.1. As-Cast Austenite Refinement; 5.2. Austenite Conditioning; 5.3. Processing Maps; 5.4. Optimisation of Rolling Schedules; 5.3. Phase Transformation; 6. Industrial Applications 6.1. Structural and HSLA Steels6.2. Development of API Grades; 6.3. Dual Phase Steels; 6.4. Concluding Remarks; 7. References
Sommario/riassunto	Thin slab casting and direct rolling (TSDR) technologies are nowadays one of the most promising processing routes to maintain steel as a

leading material in technological applications. Initially, this process was exclusively for the production of mild steels. As industrial experience and knowledge improved, a rapid expansion of the range of products took place with higher strength grades becoming an important part of the overall production. Actually, it is widely accepted as a route to produce high value grades and it can be considered as a technology which has reached a high degree of maturit
