Sommario/riassunto	Bringing together leading academics from across a range of disciplines, Emergent Urbanism identifies the specific issues dominating today's urban planning and urban design discourse, arguing that urban

planning and design not only results from deliberate planning and design measures, but how these combine with infrastructure planning, and derive from economic, social and spatial processes of structural change. Combining explorations from urban planning, urban theory, human geography, sociology, urban design and architecture, the volume provides a comprehensive and state-of-the-art overview
