

1. Record Nr.	UNINA9910465649203321
Autore	Bellany Ian
Titolo	Curbing the spread of nuclear weapons [[electronic resource] /] / Ian Bellany
Pubbl/distr/stampa	Manchester, : Manchester University Press, 2005
ISBN	1-84779-600-1 1-78170-132-6 1-84779-206-5
Descrizione fisica	1 online resource (239 p.)
Disciplina	327.1747
Soggetti	Nuclear arms control Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	9780719067969; 9780719067969; Copyright Page; Contents; Figures; Tables; Preface; Abbreviations; Introduction; 1 Nuclear weapons and nuclear energy; 2 Nuclear weapons and international security; 3 The International Atomic Energy Agency and safeguards; 4 Understanding nuclear-free zones; 5 United States policy on non-proliferation and the Nuclear Non-proliferation Treaty; 6 Bargaining for test ban treaties; Appendix A: The Baruch Plan; Appendix B: Atoms for Peace; Appendix C: Treaty on the Non-proliferation of Nuclear Weapons; Appendix D: Treaty of Tlatelolco documentation and texts Appendix E: Joint Declaration on the Denuclearization of the Korean Peninsula Index
Sommario/riassunto	Provides a fully detailed but accessible and accurate introduction to the technical aspects of nuclear energy and nuclear weapons Demonstrates that international security is unlikely to benefit from encouraging the spread of nuclear weapons Includes a full discussion of the phenomenon of nuclear-free zones, with particular emphasis on the zone covering Latin America Frankly appraises the International Atomic Energy Agency's safeguards system

Sommario/riassunto	<p>This book uses algebraic tools to study the elementary properties of classes of fields and related algorithmic problems. The first part covers foundational material on infinite Galois theory, profinite groups, algebraic function fields in one variable and plane curves. It provides complete and elementary proofs of the Chebotarev density theorem and the Riemann hypothesis for function fields, together with material on ultraproducts, decision procedures, the elementary theory of algebraically closed fields, undecidability and nonstandard model theory, including a nonstandard proof of Hilbert's irreducibility theorem. The focus then turns to the study of pseudo algebraically closed (PAC) fields, related structures and associated decidability and undecidability results. PAC fields (fields <math>K</math> with the property that every absolutely irreducible variety over <math>K</math> has a rational point) first arose in the elementary theory of finite fields and have deep connections with number theory. This fourth edition substantially extends, updates and clarifies the previous editions of this celebrated book, and includes a new chapter on Hilbertian subfields of Galois extensions. Almost every chapter concludes with a set of exercises and bibliographical notes. An appendix presents a selection of open research problems. Drawing from a wide literature at the interface of logic and arithmetic, this detailed and self-contained text can serve both as a textbook for graduate courses and as an invaluable reference for seasoned researchers.</p>
