Sommario/riassunto	This book focuses on how supply chain finance serves and improves industrial supply chain and financial activities of SMEs in China from innovative perspective. How does supply chain finance empower SMEs? What is the basis for granting credit to SMEs? What kind of supply chain finance model can most effectively support SMEs? To address the above questions, this book adopts positivism, uses an inductive method and carries out case studies through qualitative analysis. At the end of book, the author concludes although many successful cases of supply chain finance could be found, it needs further testing and revision in practice for more enterprises due to its limits.
