Sommario/riassunto

Tracking the evolution of digital technology is no easy task; changes happen so fast that keeping pace presents quite a challenge. This is, nevertheless, the aim of the Digital Enlightenment Yearbook. This book is the third in the series which began in 2012 under the auspices of the Digital Enlightenment Forum. This year, the focus is on the relationship of individuals with their networks, and explores "Social networks and social machines, surveillance and empowerment". In what is now the well-established tradition of the yearbook, different stakeholders in society and various disciplinary comm

Note generali	Includes indexes.
Nota di contenuto	Frontmatter -- Preface -- Contents -- 1. Introduction and fiber-processing methods -- 2. Nanofibers -- 3. Characterization of spinning solutions and fibers -- 4. Electrospinning experiments -- 5. Selected applications of electrospun fibers and chemistry of corresponding polymers -- List of abbreviations -- Polymer index -- Subject Index
Sommario/riassunto	Focuses on basic aspects of nano/microfibers made by electrospinning with details on spinning recipes, characterization techniques and chemistry of the polymers in use. The basic understanding provided in the book, is useful for producing 1D and 3D fibrous structures with specific properties for applications, e.g. textiles, membranes, reinforcements, catalysis, filters or biomedical uses. Students and practitioners will find great value in the step by step instructions how to manufacture nanofibers. - Electrospinning equipment- History of electrospinning and nanofibers -characterization-fundamentals of electrospun fibers- Ready-made recipes for spinning solutions- Conditions for the productions of highly diverse fiber morphologies and arrangements- Chemistry of fiber forming materials
